

# Cables for The automotive industry

Velda Cable Technics is your source for innovative technologies, products and solutions for the automotive industry. We offer custom cables, meticulously assembled for any application within this industry.

Our technological know-how, among other things, focuses on advanced cables for the integrated operation of power windows and mirrors, cables for mechanical control systems and many other applications like brake cables, cables for the mechanics of car seats, transmission cables, push-pull cables, clutch cables, tacho cables and many more.

In short, for each application within the automotive industry we develop and/or assemble the unique cable you are looking for.

Quality cables since 1935

# Cables for The automotive industry

## Why opt for Velda Cable Technics?

As a European-based company with a high-performance unit in Asia, we focus on big-volume cable production and assembly following the European certification systems.

Our logistic activities are coordinated and centralized in Europe. The smaller series are produced in our Belgian production unit. This combination guarantees flexible stock conditions and just-in-time deliveries at sharp prices.

In short, Velda combines flexibility and sharp prices with European top quality.

## Custom made goods

We control and supervise the entire production process. We can produce almost any kind of cable, suspension, etc. on demand. Contact our commercial department to inquire about your specific needs.
