

Velda Twister

Thanks to our broad experience, we have released another brand product, next to the Velda Looper™, which makes it easy to hang up signs quickly on a false ceiling: the Velda Twister.

There are 2 types:

- | | |
|---|--|
| 1 | The cable and the Velda Twister are one assembled part. |
| 2 | The cable is assembled on a brass nickle-plated connector with inner thread, which needs to be screwed on a thread, before attaching on the Velda Twister. |

Both types of Velda Twister exist in a white and a black version. Standard lengths are available, special lengths on request.

Use

The Velda Twister is mainly used for signs in industrial buildings as the Twister is the ideal solution to hang up signal boxes, pictograms, prices, all sorts of information ... easily and quickly on false ceilings.

The Velda Twister is also ideal for suspensions in supermarkets, big offices, medical offices in hospitals and public places.
